SUMMARY

B.Tech. in Information Technology from VIT Vellore. Backend Java Developer with hands-on experience building enterprise vendor management systems and scalable microservices-based applications. Strong foundation in Data Structures, Algorithms, and full-stack web development.

TECHNICAL SKILLS

Languages: Java, HTML/CSS, JavaScript, TypeScript

Frameworks/Libraries: React.js, Spring Boot, Spring Security, Spring AI

Databases: MySQL, PostgreSQL (pgvector), MongoDB, Redis

Tools & Infra: Apache Kafka, Docker, Maven, Prisma ORM, Apache POI

EDUCATION

Vellore Institute of Technology (Vellore) — Sep 2021 – Apr 2025

B.Tech. — Information Technology (CGPA: 7.81)

Shri Vaishnav Vidya Mandir (Khargone) — Apr 2019 – May 2020

Class 12 (76.2%)

St. Jude's Hr. Sec. School (Khargone) — Apr 2017 – May 2018

Class 10 (79.4%)

EXPERIENCE

Backend Developer — Vendor Compliance & AP Automation (VCA)

Java · Spring Boot · Apache POI · MySQL · REST APIs | Enterprise Vendor Management Platform

- Developed a dynamic form engine that renders vendor-specific form configurations based on group/category, displaying contextual data to both vendors and taxpayers on their respective screens.
- Built a multi-level approval workflow for vendor onboarding: taxpayer reviews and verifies vendor-submitted data, approves it through configurable approval levels, and routes finalized records to the SAP integration layer.
- Engineered an Excel-based bulk vendor onboarding template system configurable per taxpayer; implemented automated email-triggered vendor account creation upon successful template upload via Apache POI.
- Implemented role-based data access control (RBAC) distinguishing view-only and edit permissions across vendor and taxpayer roles, ensuring data governance and security.
- Developed a taxpayer-wise Excel error report generator that validates uploaded template data against predefined field conditions and flags non-compliant records with detailed error descriptions.
- Built the Invite Tracking module with tab-based data categorization: successfully uploaded records, vendors with missing contact details, pending vendor responses, and records awaiting taxpayer approval.

PROJECTS

FinanceTracker AI — Microservices-Based AI-Powered Personal Finance Application

Java 21 · Spring Boot · Spring Security · Apache Kafka · Redis · MySQL · PostgreSQL (pgvector) · Spring AI · Docker

- Architected 4 decoupled Spring Boot microservices (Auth, Expense, Email, AI Chatbot) covering the full user and expense lifecycle.
- Implemented JWT authentication (HMAC-SHA256, 24h) with BCrypt hashing, Spring Security filter chain, and OTP-based password reset flow.
- Engineered Apache Kafka event pipelines for decoupled inter-service communication; integrated Redis caching to reduce repeated DB hits and improve API response times.
- Built expense analytics APIs with CRUD, filtering, aggregation, and chart data endpoints via JPQL; integrated Spring AI + pgvector chatbot for semantic expense search and AI-driven insights.

ACHIEVEMENTS

- Global rank 224,863 on LeetCode (356 problems solved); Institute rank 1,071 on GeeksforGeeks (139 problems solved).
- 545+ GitHub contributions across personal and open-source projects.
